Information Security

We keep your data and privacy protected at all times. Our business practice is founded on the strict implementation of security standards.

SafeEx
COMPLICATED ROUTINES MADE SIMPLE

CONTINUOUS SECURITY UPDATES

All software libraries and frameworks used in our products are regularly monitored for the latest available security patches, which are installed according to our development policy. Security updates are treated as high-priority tasks, ensuring maximum reliability of all our services.

SECURITY IS A PRIORITY

We operate in a secure IT infrastructure that provides you with safe and secure solutions and services. Our specialised team and executives oversee our security strategy and enforcement by regularly and strictly monitoring the implementation of security standards internally.

FORTIFIED SECURITY

ACCOUNT PROTECTION
Passwords are hashed using modern standard encryption algorithms and are never stored in plain text

RELIABLE INFRASTRUCTURE
We only work with ISO27001-certified infrastructure providers

ENCRYPTION
All connections are forcefully encrypted to very strict standards

INTRUSION PREVENTION
System protection by an intelligent web application firewall

DATA SEGREGATION
We enforce data separation and ensure that data are not mixed-up

VULNERABILITY SCANNING
Code and infrastructure are regularly scanned for vulnerabilities

DATA LOSS PREVENTION

A multitarget geographically separated backup solution is implemented to protect databases and file repositories and prevent data loss. All security measures are regularly evaluated and revised to keep your data safe.

PRIVACY AND DATA PROTECTION

Your privacy and data will always be protected. We operate in compliance with the European data protection regulation. We only use the information necessary for the operation. You will maintain ownership of your data.
